Marginal Seal Comparison

Cross-sectioned extracted human molars were filled with cured DuoTEMP and then immersed in methylene blue dye to determine the marginal sealing properties. DuoTEMP demonstrated excellent sealing properties. Source: internal data. *Not a trademark of Coltene

Easy, time saving application

One component without mixing. Good retention in the cavity. Easy removal.

 Bulk Fill Flow

BRILLIANT Bulk Fill Flow Refill
 1 single shade, Multi Shade adaptive material

60033280 | 44€ + VAT | 33€ + VAT

1 × Syringe of 2.3 g
 11 × Application needles

Occlusal filling

No top layer needed

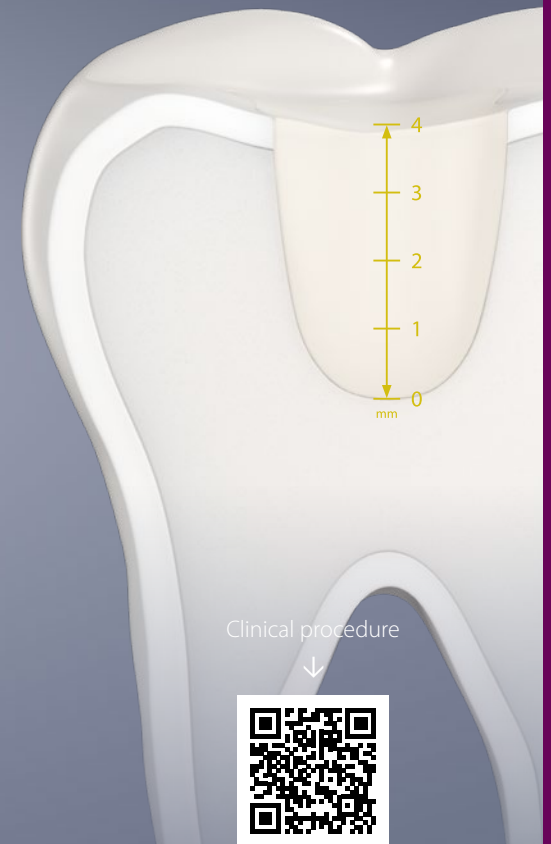

Thanks to high abrasion resistant properties, quality restorations are achieved in one efficient step since there is no need for a covering layer.

4 mm reliable curing depth

Increments up to 4 mm thickness are reliably cured in 20 sec ($\geq 1000 \text{ mW/cm}^2$). This feature combined with the surface wettability and flowability of the material offers time saving working steps.

One adaptive Multi Shade material

The chameleon effect of BRILLIANT Bulk Fill Flow allows the Multi Shade material to adapt to a wide range of tooth shades.

REINFORCED CAD/CAM COMPOSITE FOR PERMANENT RESTORATION

BRILLIANT Crios

BRILLIANT Crios is the ideal choice for single-tooth restorations, both in the anterior and the posterior region. This includes all conventional indications such as **inlays, onlays, crowns and veneers**.

HyFlex – OGSF Sequence

Features and Benefits

- Efficient treatment with high cutting performance
- High fracture resistance and flexibility
- Centered preparation of the canal
- Only one shaping file
- Sterile blister
- 2 lengths: 21 and 25 mm

Testimonials & Studies

In the past years the heat-treated Ni-Ti rotary files have become a gold standard in endodontics. However, heat-treated nickel-titanium endodontic instruments produced with the electro discharged machining are on a completely another level offering some unparalleled properties. Scientific studies show surprisingly high values of cyclic fatigue resistance, increased cutting efficiency and increased wear resistance with low degradation. The HyFlex EDM files systems offer the user a simple, predictable, safe, and cost-effective instrumentation in all clinical types of root canals, from straight to severely curved. The new OGSF sequence makes it possible to enlarge the root canal in a minimally invasive way to 30/0.04, making the EDM system even more versatile. If needed the root canals can be enlarged with EDM Hyflex 40/0.04, and further with the reducing taper from 50/0.03 to the file size up to 60/0.02 without loosing on the flexibility of the files to best preserve the original shape of the root canal all the way to the apex. Pre-bending the controlled memory EDM files also offers a simple management for by-passing ledges previously formed in the root canal. The HyFlex EDM system is the system of choice for beginners and advanced users.

Dr. Tomaž Hitij

A versatile file system can adapt to many clinical scenarios and increase instrumentation predictability. The new HyFlex EDM OGSF sequence has just arrived to make everyday endodontic challenges delightful to treat. Lovely conservative OGSF shapes and ease of use.

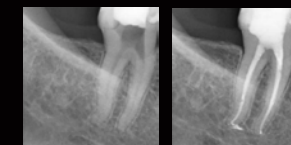

Pre-OP

Post-OP

Dr. Antonis Chaniotis

With COLTENE's new HyFlex EDM OGSF sequence endodontic procedures becomes easier. Owing to the defined, easy-to-remember sequence, learning to use these files is relatively quick, and being intuitive, the sequence is easily recalled and repeated. <https://pxl.coltene.com/-NzI2CK5>

A-SILICONE BITE REGISTRATION MATERIAL

Jet Blue Bite

Bite registration with the highest precision

Accurate bite registration is essential to ensure a true-to-life representation of the occlusion between the upper and lower teeth in the articulator. Correspondingly, the requirements placed on the material are varied. COLTENE's decades of expertise in high-quality silicone materials are reflected in Jet Blue Bite, a bite registration material that delivers fast and precise results.

Bite register	Silicone	Shade	Shore hardness*	Dimensional stability	Working time	Setting time	Taste
Jet Blue Bite fast	A		88 A	0.08 %	30 sec.	40 sec.	Neutral
Jet Blue Bite superfast	A		88 A	0.12 %	20 sec.	30 sec.	Neutral

*Shore hardness can vary between +/-2

-25%
on Jet Blue Bite

Mousse-like consistency

- ✓ Completely natural occlusion thanks to the mousse-like consistency
- ✓ No rebound effect when biting down
- ✓ Does not seep into interdental spaces

DIATECH

Diamond burs

High grinding performance and extended durability

- Gold-plated premium instruments
- 100 % natural diamond grit
- 100 % visual quality control
- ISO standardized grit sizes
- Precise blank calibration
- Higher number of diamonds per mm²
